SUBJECT: Elliott Shaanxi LNG Compressors

Elliott to Provide Duplicate Compressor Trains for LNG Project in Shaanxi, China

Jeannette, PA , November 8, 2010 - Elliott Group has been selected to build duplicate compressor trains for a new LNG complex in Shaanxi Province, China. The new plant will help to meet rising demand for natural gas for power generation and industrial development.

Elliott will provide two 32MB71 refrigeration compressors with gears and fixed speed motors for parallel LNG units. The units are expected to boost domestic LNG production by an additional 1M cubic meters per day when they go on line in late 2011.

“Elliott refrigeration compressors are already operating successfully at another regional LNG refinery, Xinjiang Guanghui,” said Todd Omatick, Business Development Manager for Elliott Engineered Products. “We were able to meet the unique compression requirements of this project and to demonstrate our technical capabilities first hand, a crucial consideration in winning this award. Elliott’s long history of refrigeration compression expertise was also of critical importance in satisfying our customer’s needs.”

Elliott will also provide the buffer gas and control systems for both compressor trains. The equipment will be built in Elliott’s facilities in Jeannette and Belle Vernon, Pennsylvania, USA. Delivery is scheduled for July, 2011.

About Elliott Group

Elliott Group is a global leader in the design, manufacture and service of technically advanced centrifugal compressors, steam turbines, power recovery expanders and axial compressors used in the petrochemical, refining, oil & gas and process industries, as well as in power applications. The company employs 1900 persons in 32 locations around the world. Elliott is a wholly owned subsidiary of Ebara Corporation, a major industrial conglomerate headquartered in Tokyo, Japan. Ebara employs 15,000 people and has sales of US \$5 billion.
