

Protect your YR turbine bearings and save 20%

An Elliott Bearing Isolator (EBI) extends the life of YR steam turbine bearings by reducing oil contamination and eliminating oil leaks. And you'll save 20% on EBI orders received by December 31, 2009.

Specifically engineered by Elliott for YR turbines, we have EBIs in stock for most YR models.

Elliott offers a complete line-up of parts, service and support for our entire fleet of turbines and compressors. That's why companies around the world turn to Elliott to keep their critical turbomachinery operating reliably.

To order your EBI upgrade, contact Elliott Service Parts or your local sales rep for details.
