

# Elliott TG Governor Tachometer Kit

Knowing the speed of your steam turbine is critical to ensure safe, reliable operation. At Elliott Group, we offer a TG Governor Tachometer Kit that allows you to monitor the speed of your steam turbine, at all times, from a local display mounted directly on the governor.

When our tachometer is installed on your steam turbine, you will be able to quickly see an accurate reading of your turbine's speed during startup, during normal operation, and when adjusting trip speed. The four-digit, LCD display is easy to read so you can immediately determine if your turbine is running within or outside its normal operating parameters. The ongoing speed reading will allow you to react fast and make adjustments, when necessary.

The Elliott TG Governor Tachometer Kit is simple to install. It has no power connections, and the signal and power is derived solely from the magnetic pickup or pulser. It also is highly resistant to shock and vibration.

Additional features of the Elliott TG Governor Tachometer Kit include:

- ♦ High accuracy: 1-rpm resolution
- ♦ Intrinsically safe
- ♦ Gasketed and sprayproof
- ♦ Local, digital, LCD display
- ♦ Canadian Standards Association approved

Contact us today to learn how the Elliott TG Governor Tachometer Kit can help provide an accurate reading of your steam turbine's speed at all times to help ensure safe, reliable operation.
